Electric projection screen 169" 3x3 meters

A SCREEN FOR ANY TIME

The 197" electric video projection screen 'Elec350-Screen' from Phoenix Technologies is another great value for commercial or home use. This slim screen is ideal for any office, business center or school, as it can be installed in any on the wall or on the ceiling, taking up very little space. The sturdy steel frame fits perfectly into even the smallest of rooms. The screen is finished in matte white, ensuring a bright, clear, and crisp image. In addition, the surface is easy to clean and maintain. Phoenix is the perfect solution for all businesses opening a new facility, schools looking to add a projection center or expanding corporations. With a "plug and play" design and a very simple installation, the Elec350-Screen comes with a remote control for a comfortable collection mechanism.

Features

- The aluminum case also has an over-ride switch located at the end of the case. Depending on the type of installation you can comfortably use both the switch and the remote control to display your screen.
- Tubular motors are known for being calm and quiet, stable and smooth. You will be able to raise and lower your projection screen slowly and precisely with the touch of a button. The tubular motor is the heart of this motorized projection screen and ensures years of reliable, trouble-free operation.
